

Customer Portal

Step-by-step customer journey, catalogue access, brand pricing and promotions

One shared login. A unique customer context. The right price for every brand.

What the Customer Portal must achieve

A simple experience for customers and a controlled source of truth for administrators.

01

Simple access

A shared customer login plus a unique customer link or access code.

02

Correct pricing

Every product resolves price from its own brand mapping and customer profile.

03

Published content only

Customers see catalogues and promotions that are ready for external use.

04

Self-service

Browse, search, save, open and download without admin controls.

End-to-end customer journey

The customer completes one access step; the platform handles the remaining pricing decisions.

Customer result

The same catalogue can safely show different final prices to different customer profiles.

Step 1 - Sign in and identify the customer

A shared login authenticates the user; the unique access context identifies the commercial profile.

1

Customer signs in

- Account type must be Customer Account
- No admin or Catalogue Studio routes are exposed
- Unauthenticated users return to login safely

ACCESS CONTEXT

Siam Retail Co.

VIP BKK PRICING

Resolved from:

Customer link / access code
+ customer profile
+ catalogue audience

Security rule: never select pricing from a URL query alone.

Step 2 - Land on a focused customer home

The interface keeps catalogue work visible and removes every internal administration option.

2

Customer portal structure

Step 3 - Browse only published catalogues

Every card uses the real cover and the customer-specific public link.

3

What customers can do

- Search by catalogue title or brand
- See the full catalogue cover
- Open the customer-priced catalogue
- Save favourites and download PDF

Hidden automatically: Draft | Archived | Expired links

Step 4 - Resolve the correct brand price

Pricing is decided per product, not once for the whole catalogue.

4

Resolution sequence

Siam Retail pricing profile

BRAND	ERP PRICE SOURCE	RESULT
Nubwo	SP2	Use Nubwo SP2 price
Ceflar	SP5	Use Ceflar SP5 price
ABBY	SP3	Use ABBY SP3 price

Multi-brand catalogue pricing

One catalogue may contain many brands; each product follows its own mapping.

5

Example: Business Essentials 2026

Never force one ERP price level across every brand.

Step 6 - Apply an eligible promotion

Promotions adjust the mapped customer price only when every eligibility rule passes.

6

Price calculation

Mapped base price

THB 2,150

-

Eligible promotion

10% OFF

=

Final customer price

THB 1,935

Promotion eligibility checks

- Attached to the accessible catalogue
- Matches the customer audience
- Currently active and within date range
- Product included and stock rules satisfied

Step 7 - View, save and download

The public catalogue and PDF use the same customer access context and pricing rules.

7

Customer actions

OPEN

View every published page

SAVE

Keep the catalogue in Saved

PDF

Download when link allows it

Consistent output

Browser view and PDF must contain the same pages, covers, mapped prices and eligible promotions.

Administrator setup - five short steps

SuperAdmin or Sales Admin prepares the customer experience before sharing access.

Keep it simple

The customer never chooses a price list. Administrators configure the rules once; the platform resolves them automatically.

Permissions and security controls

Customer convenience must not weaken commercial data controls.

CUSTOMER CAN

- View published catalogues
- Open active promotions
- See resolved account prices
- Save and download allowed content
- Switch EN / TH and get help

PLATFORM ENFORCES

- Customer Account role required
- Named, scoped access link required
- Draft and archived catalogues excluded
- Expired or revoked links rejected
- Admin, edit and pricing controls hidden

Access is secure by role + customer context + link status.

Clear fallback rules prevent pricing mistakes

Every missing or invalid condition produces a predictable customer-safe result.

CONDITION	PLATFORM RESPONSE	CUSTOMER EXPERIENCE
Brand mapping exists	Use mapped ERP level	Correct brand price
Brand mapping missing	Use approved default mapping	Default customer price
No safe mapping	Return No Price	Price is hidden
No active promotion	Keep mapped base price	Normal account price
Expired/revoked access	Reject request	Ask administrator for access

Rule: never guess a price and never expose another customer's pricing profile.

Ready for customer rollout

Validate the complete journey with one real customer profile before launch.

- OK Customer Account login routes to /customer
- OK Unique access code resolves the correct profile
- OK Only published catalogues are visible
- OK Multi-brand prices match ERP mappings
- OK Eligible promotions produce the expected final price
- OK Browser view and PDF show the same complete content
